Natural Swimming Pools [DVD] Directed by David Pagan Butler

David Pagan Butler takes you through two projects step by step. The first one is how to build a plunge pool, an ideal nature reserve that you can swim in too. Learn how to design the structure, build the swimming area, fit a liner, plant the edges and make a simple solar powered pump to filter the water. Many of the materials used can be recycled and collected as you plan the project. The second part of the DVD shows you how to make a much larger natural swimming pool. Again he shows how to make the pool in detail but critically he also shares his mistakes so you can take advantage of the benefit of his experience. Made by a professional filmmaker who is also a hands-on practitioner and a master of recycling, this practical film shares all the information you need to enable you to build a beautiful swimming pool that is also a wildlife habitat for a fraction of the cost of one installed by a professional contractor.

Review

We already know that swimming pools are a huge suck on natural resources, not to mention a possible source of allergies. But from Brooklyn's repurposed dumpster pools to high-end natural swimming pools, we've seen plenty of examples of greener ways to swim here at TreeHugger. Now a new DVD is hoping to show everyone how they can build their own backyard swimming pool that is chemical free, and also a haven for wildlife. The good news is that it will cost you a fraction of what a conventional pool would set you back too. The designs, say David, are both low impact in terms of chemicals and resource use, and also provide an abundant and diverse habitat for creatures to co-habit with swimmers. Part pond, part pool, the concept is to have an insulated, central swimming area surrounded by a filtration area consisting of natural wetland plants. Water is then circulated using solar power, and passed through a simple filtration system built from scrap parts. It all looks pretty amazing. Now if I can only convince the wife that we don't really need that lawn... --Sami Grover, treehugger.com

A natural swimming pond is a pool within a pond; self-cleansing, wildlife-friendly and easier on the eye than its conventional chlorine-filled counterpart. In this new DVD David Butler demonstrates that a natural swimming pond can also be constructed as a home DIY project, using some nifty material upcycling and at a fraction of the cost of a professional installation. David jumps in the deep end(!), giving us his step-by-step guide to building not one but two home swimming ponds, never shy of highlighting his own early errors with a refreshing good humour. We are shown the entire landscaping process from marking out the ground, excavation and laying foundations through to constructing the blockwork, choosing the pond-liner and sculpting the marginal areas ready for planting. The presentation is clear and David gives some excellent demonstrations of particular techniques, a useful display of the bunyip level in action, and an ingenious sandbag-filling device. --Henry Dowell, Permaculture Magazine
